

# Einschätzung der Validität von Fussbodenheizungs-Modelle

Institut Energie am Bau – FHNW, Ralf Dott

14.02.2014

## Grundlagen:

Katalogdaten Uponor-Katalog "TI\_Uponor Gebaeudetechnik\_1059201\_10\_2013\_linked.pdf"  
S.372 – „Uponor Classic 17“

### Uponor Classic 17

Dim. 17

für Lastverteilschicht Zementestrich:

Rohrüberdeckung 45 mm, Wärmeleitfähigkeit 1,2 W/mK

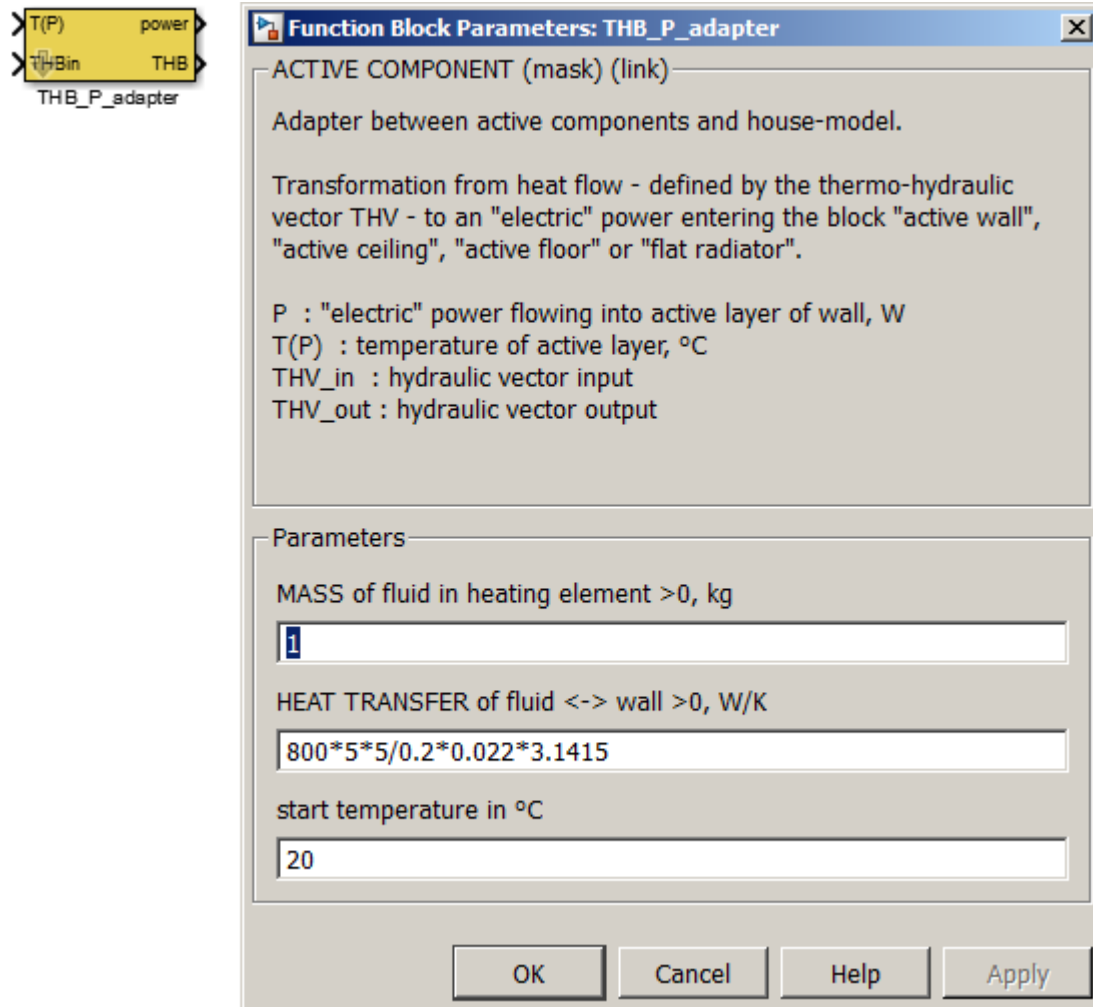

Auslegungstabelle,  $\vartheta_{\text{f}} = 20\text{ °C}$ ,  $R_{\lambda, \text{B}} = 0,15\text{ m}^2\text{K/W}$

| $\vartheta_{\text{f, m}}$ [°C] | $q_{\text{des}}$ [W/m²] | $\vartheta_{\text{V, des}} = 54,8\text{ °C}^{(1)}$ |                        | $\vartheta_{\text{V, des}} = 50\text{ °C}$ |                        | $\vartheta_{\text{V, des}} = 45\text{ °C}$ |                        |

|   |              |
|---|--------------|
| Ti  | = 20 °C      |
| $R_{\lambda, \text{B}}$                             | = 0.15 m²K/W |
| $R_{\lambda, \text{ins}}$                           | = 0.75 m²K/W |
| Rohrüberdeckung d                                   | = 45 mm      |
| Wärmeleitfähigkeit Überdeckung $\lambda_{\text{d}}$ | = 1.2 W/mK   |
| Rohrdurchmesser                                     | = 17.6 mm    |
| Rohrwandstärke                                      | = 2.3 mm     |
| Wärmeleitfähigkeit Rohrwand                         | = 0.35 W/mK  |
| Massenstrom   | = 15 kg/m²h  |
| Fussbodenfläche im Modell                           | = 10 m²      |

## Modell mit konstantem UA-Wert

Das Modell erfordert einen UA-Wert für den Wärmeübergang vom Heizmedium an die Wand-schicht.

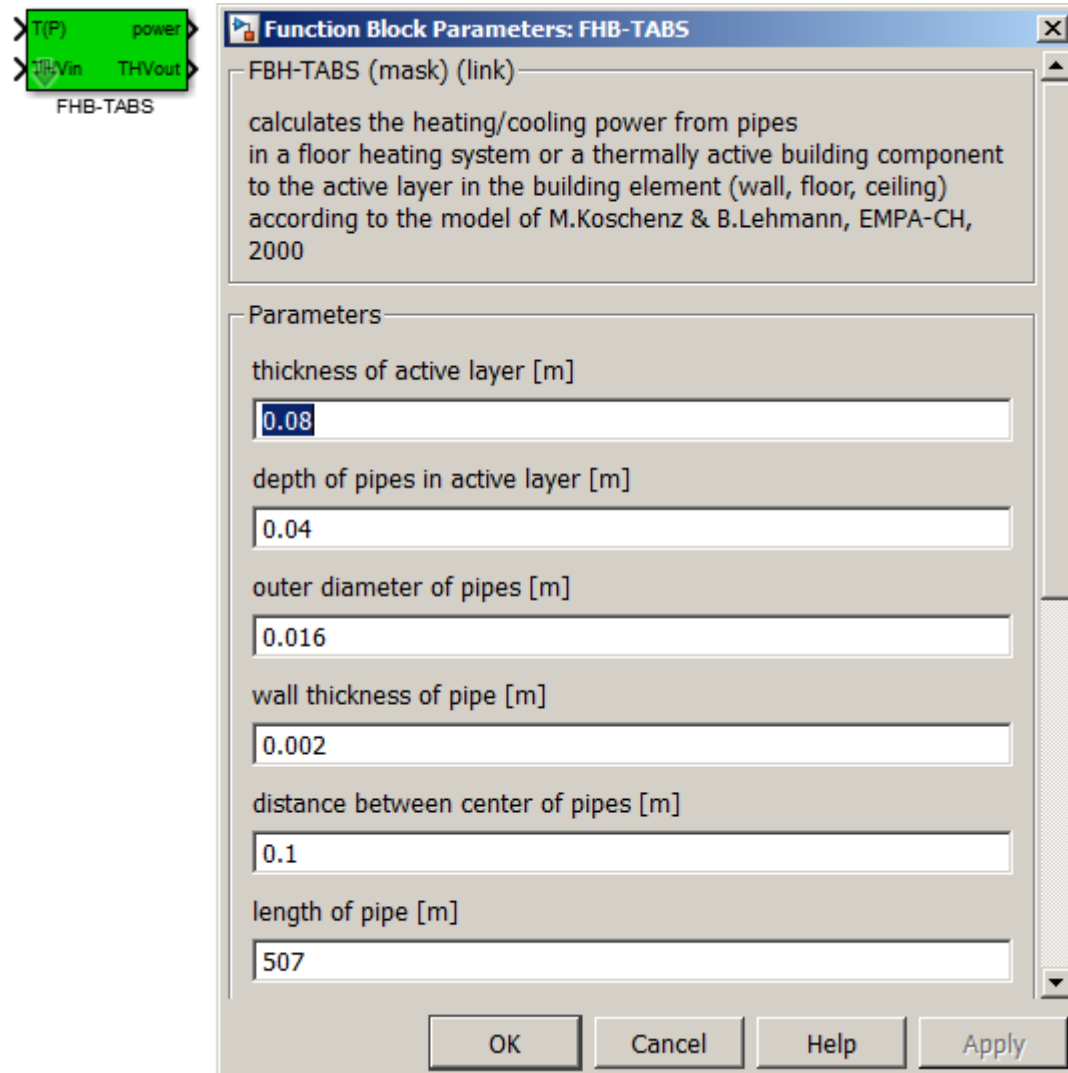

Dieser kann aus Katalogdaten eines Fussbodenheizungsherstellers bestimmt werden gemäss:

$$\begin{aligned}\dot{Q} &= UA_R * (T_{Rohr,m} - T_P) \\ \dot{Q} &= UA_R * \left( T_{V,des} - \frac{T_{V,des} - T_{R,des}}{2} - T_P \right) \\ \dot{Q} &= UA_{\text{Überdeckung}} * (T_P - T_{F,m}) \\ \dot{Q} &= \frac{1}{R_{\lambda,B} + \frac{d}{\lambda_d}} * (T_P - T_{F,m}) \\ UA_R &= \frac{\dot{Q}}{\left( T_{V,des} - \frac{T_{V,des} - T_{R,des}}{2} - \left( T_{F,m} + \dot{Q} * \left( R_{\lambda,B} + \frac{d}{\lambda_d} \right) \right) \right)}\end{aligned}$$

## TABS-Modell nach Koschenz-Lehmann, 2000

Koschenz, M.; Lehmann, B.: Thermoaktive Bauteilsysteme tabs. EMPA, Dübendorf, 2000. ISBN 3-905594-19-6

Das TABS-Modell nach Koschenz, Lehmann erfordert geometrische Angaben zum Fussbodenheizungs Aufbau aus Katalogdaten und berechnet daraus den UA-Wert.

|  |             |                |        |            |           |             |                       |             |             |         |           |                           |         |           |             |                |           |             |         |                              |  |  |  |
